TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS;
FILL REFERENCE: 107136.136
CURRENT FILING DATE: 1999-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142
SEQ ID NO 12501
LENGTH: 2103
TYPE: DNA

Also disclosed is a method for evaluating rice blast fungus (Pyricularia oryzae) and Magnaporthe grisea sensitivity to scytalone dehydrogenase inhibitors. The gene is useful for screening for new SCDH inhibitors a evaluating sensitivity to them. The current sequence represents the

Also disclosed is a method for evaluating rice blast fungus (Pyricularia oryzae) and Magnaporthe grisea sensitivity to scytalone dehydrogenase inhibitors. The gene is useful for screening for new SCDH inhibitors a evaluating sensitivity to them. The current sequence represents the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                            The invention relates to a gene encoding scytalone dehydrogenase (SCDH), that functions in the presence of an inhibitor, comprising an optionally mutated, defined amino acid sequence given in the specification. Also disclosed is a method for evaluating rice blast fungus (Pyricularia oryzae) and Magnaporthe grisea sensitivity to scytalone dehydrogenase inhibitors. The gene is useful for screening for new SCDH inhibitors and evaluating sensitivity to them. The current sequence represents the scytalone dehydrogenase DNA sequence. Note: gene sequence from this is given in ADC16590.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Scytalone dehydrogenase; SCDH; rice blast fungus; enzyme; inhibitor; gene; ds.

Also disclosed is a method for evaluating rice blast fungus (Pyricularia oryzae) and Magnaporthe grisea sensitivity to scytalone dehydrogenase inhibitors. The gene is useful for screening for new SCDH inhibitors and evaluating sensitivity to them. The current sequence represents the scytalone dehydrogenase DNA sequence. Note: gene sequence from this is

The invention relates to a polynucleotide having any of 6006 specific sequences (ABZ50888-ABZ56893), which are expressed by a fungus under specific culture conditions including one or more of eutrophic, oligotrophic, solid, early germination, alkaline, high temperature, low temperature or maltose culture or polynucleotides stringently hybridising to these sequences. The polynucleotides are useful for monitoring the progress of fermentation and the growth conditions of a fungus, especially of Aspergillus oryzae which is widely used in industrial fermentation. Also monitoring for fungal contamination. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Aspergillus oryzae; fermentation; fungus; industrial; EST; expressed sequence tag; gene; ss.

                                                                                                                                                           Percent Similarity:
                                                                                                                                            Local
                                                                                                                                                                                                                                                                                                  The invention relates to isolated Acinetobacter baumannii nucleic acids. The A. baumannii nucleic acids and polypeptides are useful as reagents for diagnosing a bacterial disease, as components of antibacterial vaccines, as targets for antibacterial drugs, to detect the presence of A. baumannii and other Acinetobacter species in a sample, in screening compounds for the ability to interfere with the A. baumannii life cycle or to inhibit A. baumannii infection, and as biocontrol agents for plants. The present sequence represents DNA encoding an A. baumannii

         The invention relates to nucleic acid molecules from rice encoding proteins for abiotic stress tolerance, enhanced pathogen or disease resistance and altered nutritional quality. The sequences of the invention are useful for altering abiotic stress tolerance, pathogen or disease resistance or the grain quality, nutritional content or yield in a plant. The present sequence is rice disease resistance gene, LOX1
                                                                                                                                                                                                                                                                      New nucleic acid from Oryza sativa, useful for altering abiotic stress tolerance, pathogen or disease resistance or the grain quality, nutritional content or yield in a plant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   30-NOV-2001;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Oryza sativa

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              sequences or fragments, are useful as primers and probes for detection and amplification, including differentiation between the paris and Philadelphia strains of Legionella pneumophila and to prepare recombinant (hybrid) polypeptides (II). (II) are also useful for preparation of specific antibodies (Ab), also used for detection/identification of Legionella, and some (I), specifically those involved in synthesis of surface proteins, are targets for identification of inhibitors. (II), or vectors that contain (I), are useful as vaccines and immunogenic compositions, for treatment and prevention of infections by L.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 48622 BP; 15468
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New genome of Legionella pneumophila Paris strain and derived polypeptides, useful for detection or identification of the substraction and prevention of infections.

(I), and their related sequences or fragments, are useful as primers and probes for detection and amplification, including differentiation between the Paris and Philadelphia strains of Legionella pneumophila and to prepare recombinant (hybrid) polypeptides (II). (II) are also useful for preparation of specific antibodies (Ab), also used for detection/identification of Legionella, and some (I), specifically those involved in synthesis of surface proteins, are targets for identification of inhibitors. (II), or vectors that contain (I), are useful as vaccines and immunogenic compositions, for treatment and prevention of infections by L.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New genome of Legionella pneumophila Paris strain and derived polypeptides, useful for detection or identification of the s for treatment and prevention of infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (INSP )

It was isolated from Helicobacter pylori and encodes a H.pylori GHPO protein. The polypeptides can be used for preventing or treating Helicobacter infections, and gastroduodenal diseases associated with these infection including acute, chronic, and atrophic gastritis, and peptic ulcer diseases, e.g. gastric and duodenal ulcers. They can also be used for the production of antibodies. The products can also be used for detection is diagnosis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       뮍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                         CC CDNA, designated SIP7. By using Smadl C-domain fused to GALA DNA-binding CC domain and a mouse embryo cDNA as bait and prey, respectively, in a two-cc hybrid screen, a partial Smadd and Smad interacting protein cDNAs (see CC AAV72502-05 and AAV72512-25), were obtained, including SIP1 (see CC AAV83318). The invention also provides recombinant expression vectors, CC transfected or transduced cells, a method of screening for compounds which affect the interaction between SMAD and SMAD interacting protein, CC transgenic animals useful for testing medicaments and as therapy models, CC and a method for post-transcriptional regulation of gene expression by CC members of the TGF-beta superfamily by manipulation or modulation of the interaction between Smad function and/or activity and mRNA stability.

CC SIPs and nucleic acids encoding them are useful therapeutically and in CC claimed kits for diagnosing diseases one metabolism related diseases CC or disorders and diseases affecting organs such as skin, lung, kidney, CC pancress, stomach, gonad, muscle or intestine. (Updated on 20-MAR-2003 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     useful for diagnosing neural disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Mouse SMAD

   The invention relates to new Proteus mirabilis polypeptides and polypucleotides. The invention also relates to antibodies against the polypeptides, methods for producing the polypeptides, a method of generating vaccines for immunising an individual against P. mirabilis, a method for evaluating a compound for the ability to bind a P. mirabilis polypeptide and a method for screening test compounds for anti-bacterial activity. The polypeptides and polypucleotides are useful as molecular targets for diagnosing, preventing and treating pathological conditions resulting from bacterial infection, as reagents for diagnosis of bacterial diseases, as components of antibacterial vaccines, as targets for antibacterial drugs or as bio-control agents for plants. This sequence represents a Proteus mirabilis polynucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New Proteus mirabilis polypeptides and polynucleotides, useful as reagents for diagnosis of bacterial disease, as components of antibacterial vaccines, as targets for antibacterial drugs, or as biocontrol agents for plants.
